VESTANAT®
Polyurethane crosslinkers
for liquid coating applications

VESTA – Developed in Germany.
Available globally.
For more than 55 years Evonik’s Business Line Crosslinkers has been the reliable partner and solution provider in the field of isophorone chemistry. With global production sites, we are uniquely placed to satisfy our customers’ demands. Our portfolio of VESTA products showcases high performance materials that enhance the quality of our customers’ applications.

VESTA – Developed in Germany. Available globally.

Benefits at a glance
- Versatile product range
- Excellence in quality
- Securing reliability for coating formulations
- Global technical service and R&D

With its highly specialized product portfolio and broad expertise in crosslinker technology, Evonik is a major and essential provider of new solutions for liquid coating systems. Our strong competitive position is based on integrated technology platforms, innovation power and close cooperation with our customers.

VESTANAT® products are a natural fit for high performance PUR coatings.
Crosslinking makes the difference…

In a well-linked network, by connecting many individuals, a continuously stable performance can be assured and often even the positive extra can be achieved. The idea of crosslinking can be applied in the field of coating systems. Single molecules have the potential to perform outstandingly, but crosslinked molecules surpass the level of superior performance.

VESTANAT® crosslinkers focus on aliphatic polyisocyanate crosslinkers that are light-stable. They are based on e.g. IPDI isocyanurate trimer, for the formulation of one- (1K) and two component (2K) polyurethane systems.

Non-crosslinked coatings
Without crosslinking, a coating will be easily influenced by environmental impacts and will consequently lead to the damaging of the substrate.

Crosslinked coatings
Crosslinkers increase the stability of the coating and improve the resistance towards environmental impacts.

Polyisocyanate crosslinkers in 2K systems
- Combination with a resin component right before application
- Reaction starts immediately after mixing the polyisocyanate with the resin component
- Reaction leads to a 3D network with a high durability

Evonik solutions for 2K systems
VESTANAT® T
Polyisocyanates; IPDI-trimer

Blocked polyurethane crosslinkers in thermosetting 1K systems
- Contains blocking agents e.g. ε-caprolactam
- At ambient temperature: blocked polyurethane crosslinkers cannot react with the resin component
- At elevated temperatures: the blocking agent will be released and the isocyanate group can react with the resin

Evonik solutions for 1K systems
VESTANAT® B
Blocked polyurethane crosslinker
VESTANAT® EP-DS
Waterborne blocked polyurethane crosslinker

These crosslinkers come along with ready-to-react isocyanate groups which can link with isocyanate reactive functionalities e.g. hydroxyl groups. To address the challenges of today and tomorrow we offer high performance crosslinkers for the use in high-end applications.
Selection of solutions

VESTANAT® T 1890 / E / L / SN
are cycloaliphatic polyisocyanate crosslinkers with a high compatibility. The crosslinkers are used for light-stable and weather-resistant 2K PUR systems with improved physical drying properties and chemical resistance. They are available as 70% solutions in different solvents.

VESTANAT® B 1358 A
Is a blocked cycloaliphatic polyurethane crosslinker for the use e.g. in 1K automotive OEM primers generating excellent intercoat adhesion. It is characterized by an excellent balance of reactivity and storage stability.

VESTANAT® B 1186 A
Is a cycloaliphatic blocked polyurethane crosslinker for interior BPA-NI* can coatings. According to FCN No. 1268, VESTANAT® B 1186 A is eligible for food contact applications. Please refer to FCN. No. 1268 or get directly in touch with us for further details.

* BPA-NI = Bisphenol A – not intentionally added

VESTANAT® B 1358 A
Is a cycloaliphatic blocked polyurethane crosslinker to be used for exterior can coatings.

VESTANAT® B 1481 ND
Is a cycloaliphatic blocked polyurethane crosslinker to be used for coil coating formulations due to a low tendency to yellow during curing process.

VESTANAT® EP-DS 1205 E
Is a blocked polyurethane crosslinker based on cycloaliphatic VESTANAT® IPDI emulsified in water without any auxiliary solvents for combinations with anionic or cationic 1K formulations for e.g. glass, metal or textile coatings.

APPLICATIONS

Agriculture & Maintenance

Automotive OEM & Car Refinish

VESTANAT® polyisocyanate crosslinkers are used for the formulation of highly weather- and chemical resistant PUR coatings. VESTANAT® T 1890 imparts faster dry times, which result into remarkably short curing cycles even at ambient temperatures.

Can- & Coil Coating

Blocked VESTANAT® polyurethane crosslinkers offer solutions for interior as well as exterior coating applications within the can- & coil coating industry. Highly flexible coatings with superior durability are easy to obtain, ensuring prime protection.

Decorative & Industrial

Unique VESTANAT® DS grades are sophisticated blocked waterborne crosslinkers. These products are available either for anionic or cationic 1K formulations for e.g. glass, metal or textile coatings.
Specialties

Crosslinker specialties adjust your coating systems according to your individual needs and add a unique touch to your formulation. Our versatile spectrum of specialty products complement your specific application requirements. Please contact us to elaborate on your tailor-made solution.

Extract of crosslinker specialties application fields:
• OEM applications
• Maintenance
• Industrial
• Wood
• Plastic coatings

Selection of solutions

VESTANAT® T 1890/100
Is a solvent-free cycloaliphatic polyisocyanate crosslinker which can be used in 2K PUR systems e.g. for the manufacture of PUR resins or blocked polyisocyanates. Its broad solubility in all types of non-protic solvents gives our customers the chance to choose a solvent which fits best to the coating application.

VESTANAT® B 1358/100
Is a solvent-free blocked cycloaliphatic polyisocyanate crosslinker which can be used in 1K PUR stoving systems. The solvent-free delivery form offers a great choice of possible solvents to be used with the benefit of the optimization of many paint formulations.

VESTANAT® EP-B 1358 DINP
Is a cycloaliphatic blocked polyurethane crosslinker component supplied as a solution in diisononylphthalate for the combination with plastisols and organosols. It is specially developed e.g. for under-the-body coatings leading to a solid and resistant result.

VESTAMIN® A 139
Is a liquid blocked crosslinker for polyisocyanate resins based on a cycloaliphatic diamine. The product exhibits a very low reactivity towards isocyanate groups. The fast crosslinking with polyisocyanate resins occurs under the influence of moisture by releasing the original diamine.

OXYESTER® EP-HS 2272
Is a linear polyester diol, developed primarily for the use in aliphatic PUR technology, especially as a VOC-reducing co-polyol in 2K PUR high solid coatings.

OXYESTER® T 1136
Is a linear saturated polyester diol. It is mainly applied as a flexibilizing polyol in 2K PUR high solid paints or 1K stoving systems.
